BULLITT CENTER

The Bullitt Center sets the bar for sustainable building design. Even 7 years after its official opening, this six-story office building in Seattle is often referenced as the ‘greenest commercial building’ in North America.

Designed by Miller Hull, the building features a myriad of sustainable technology and novel systems, including radiant hydronic floor heating, greywater treatment system, 575 rooftop solar panels and even composting toilets.

The exterior rainscreen cladding system features 4,500 Cascadia Clips®, acting as thermal spacers and increasing the building envelope’s overall thermal performance.

The Living Building Certified office is also focused on longevity, with a projected useful lifespan of 250-years.

PROJECT DETAILS:
- 4,500 Cascadia Clips delivered (4” Length)
- 9,000 Master Griper fasteners
- 6,300 linear feat of pre-punched galvalume hat-track
