This document offers a guide for using the pre-punched holes on the provided Z-girt for different vertical spacings of the Cascadia Clip®.

The three spacings shown here are the standard, recommended spacings for the Cascadia Clip. Confirm with the designer for the spacing to be used.

The clip locations shown in black represent accurate specified spacing, from center of clip to center of clip. The clip locations shown in dashed red offer an alternate location on the Z-girt to allow for obstacles in the wall assembly, while still staying within the specified spacing.
