

Cascadia Windows & Doors Joins Rainscreen Association in North America (RAiNA)

CASCADIA WINDOWS & DOORS JOINS RAINA, A BROAD MEMBER-BASED INDUSTRY ASSOCIATION DEDICATED TO ADVANCING PERFORMANCE-DRIVEN RAINSCREEN ASSEMBLIES ACROSS NORTH AMERICA.

Langley, B.C., Canada: Industry-leading manufacturer Cascadia Windows & Doors recently joined the Rainscreen Association in North America (RAiNA), becoming a member in the broad member-based industry association dedicated to the advancement of rainscreen building assemblies.

With over 70 current members from across North America, including RDH Building Science, ROCKWOOL, PROSOCO & IAPMO, the association's member committees will develop technical information, liaise with building code regulatory bodies and advocate for more durable, resilient, healthy, energy-efficient, and safe buildings.

"We're proud to be joining RAiNA," says Cascadia Windows & Doors President Mike Battistel. "Their mission and values closely align with our own work promoting data-driven, high-performance cladding assemblies through our Cascadia Clip® brand."

Focused on promoting building science-based performance criteria and supplying the industry with objective product data and design tools, RAiNA is positioned to become the recognized focal point for the industry in rainscreen assembly technology.

"The formation of RAiNA is quite timely in the construction industry," continues Battistel. "Architects, consultants and developers are looking for reliable information about things like resiliency, durability and overall building performance. RAiNA's focus on performance data and industry expertise offers that support to a wide audience."

Officially founded in early 2020, RAiNA has already dedicated over 10,000 person hours to the advancement of the industry through committees covering technical topics, such as code review and development, as well social responsibility topics, such as diversity, equity and inclusion.

ABOUT CASCADIA WINDOWS & DOORS:

Cascadia Windows & Doors is an innovative, industry leader, creating beautifully designed architectural fiberglass windows, doors, as well as the innovative Cascadia Clip® cladding thermal spacers. Included in some of the most exciting and award-winning construction projects across North America, Cascadia's goal is to help revolutionize the energy-efficiency of modern buildings and drive the adoption of high-performance building products.

From residential Passive House projects to commercial and multi-family buildings, the Cascadia Clip® thermal spacer allows architects and specifiers to design thinner, lighter and more cost-effective exterior cladding solutions, while at the same time drastically improving a building's overall energy performance. This increased performance allows architects and specifiers to easily reduce building costs and

dramatically improve a building's overall energy performance, all while delivering an engaging, highly livable building.
